

HYPR Identity Assurance Platform

The strongest end-to-end identity security, combining phishing-resistant passwordless authentication with adaptive risk mitigation and automated identity verification

Secure Your New Perimeter

As workforce and customer demands increase, organizations must secure the entire identity lifecycle to protect against phishing, social engineering and deepfake attacks. Traditional methods are fragmented and outdated, leading to breaches, dissatisfied users and hampered business growth.

The HYPR Identity Assurance Solution

Organizations need a comprehensive solution to manage and secure the modern user lifecycle, ensuring trust in user identities at all times.

HYPR's Identity Assurance Solution unites the strongest passkey-based authentication, continuous risk monitoring, and intelligent identity verification into an end-to-end identity security platform.

This enables organizations to detect, prevent, and eliminate identity-related risks throughout the entire identity lifecycle, from onboarding to offboarding, ensuring that users are always who they claim to be.

"Identity and authentication security needs to be dynamic and continuous rather than a one-time event. HYPR's identity assurance solution helps close persistent identity security gaps and it also offers a simple, intuitive user experience that people will want to adopt."

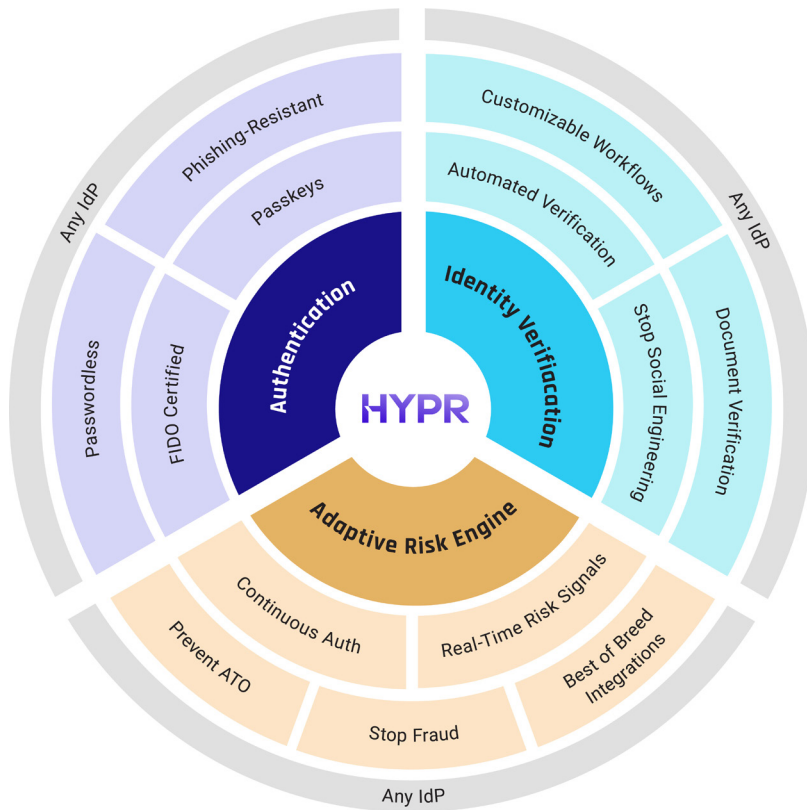

Anthony Belfiore

Chief Security Officer
